

Processing of fiber composite materials

CG TEC is not only a reliable partner in prepreg winding, pultrusion or plate pressing technique but also if it comes to processing of fiber composite materials. Everything out of one hand – based on this principle, we constantly expand our know-how.

Mill

We achieve with our **specially** tuned milling cutters long standing times and **high precision** in processing fiber composite components.

Glue

We glue on customer request individual components into assemblies. For the bonding of fiber composite materials, we use high quality adhesives that **guarantee resilient bonding on small areas.**
